OPERATING INSTRUCTIONS AND SPARE
PARTS **CE**

REV 2015-08

CHISEL

OBSERVATIONS

This handbook describes the use, maintenance instructions and spare parts supplied for the indicated plough.

The farming implement known as "plough" is designed to work the soil, linked to a tractor with lift and universal 3-point coupling.

Regular and satisfactory operation together with economic and long lasting use of the implement depends on compliance with the instructions given in this handbook. It is, therefore, advisable to strictly comply with the following instructions in order to prevent faults which could jeopardise the correct and long-lasting operation of the implement.

Compliance with the instructions in this handbook is also important **since the Manufacturer declines all and every responsibility caused by negligence and failure to comply with these instructions.**

The Manufacturer shall, however, remain at the customer's disposal for immediate and thorough assistance together with anything else that may be required in order to ensure the correct operation and maximum efficiency of the implement. The Manufacturer reserves the right to make any modifications and improvements to the implement, as may be considered opportune, without being obliged to immediately inform the user.

1. SAFETY PROVISIONS

- 1.-** Comply with the instructions given by the danger signals exposed in this handbook (Fig.1) and affixed to the plough itself.
- 2.-** Operations and adjustments to the implement must always be carried out when the engine is off and the tractor braked.
- 3.-** It is absolutely forbidden to carry passengers or animals on the plough.
- 4.-** It is absolutely forbidden for persons without a driving license, inexpert persons or those in precarious health conditions to drive the tractor with the plough mounted.
- 5.-** Strictly comply with all the recommended accident preventing measures described in this handbook.
- 6.-** Assembly of an implement on the tractor will shift the weights on the axles.
- 7.-** Before starting the tractor and plough, always check that all safety devices guarding transport and use are in perfect conditions.
- 8.-** The instructions labels affixed to the plough give useful advice on how to prevent accidents.
- 9.-** Always comply with the highway code in force in your country when travelling on public roads.
- 10.-** Comply with the maximum permissible weight on the axle of the tractor, the total adjustable weight, transport regulations and the highway code.
- 11.-** Always become familiar with the controls and their operation before starting work.
- 12.-** Take the utmost care during the plough coupling and release phases.
- 13.-** Never ever leave the driving seat whilst the tractor is moving.
- 14.-** Remember that the road holding, steering and breaking capacity may be notably influenced by the presence of a mounted implement.
- 15.-** It is absolutely forbidden to stand within the operative range of the plough.
- 16.-** Before leaving the tractor, lower the mounted plough coupled to the lift unit, stop the engine, engage the hand brake and remove the ignition key from the control panel.
- 17.-** The category of the implement coupling pins must correspond to that of the lift coupling.
- 18.-** Take care when working close to the lift links. This is a very dangerous area.
- 19.-** It is absolutely forbidden to stand between the tractor and the plough, to manoeuvre the outside lift control.
- 20.-** Set the control lever of the hydraulic lift to the locked position during road transport with the plough mounted.
- 21.-** The spare parts must correspond to the requirements established by the Manufacturer. Use only genuine spare parts.
- 22.-** The safety transfers must always be perfectly visible. They must be kept clean and should be replaced if they become illegible. Replacements are available on request from your local dealer.
- 23.-** The instruction manual must be kept for as long as the machine lasts.

(Fig.1) WARNING

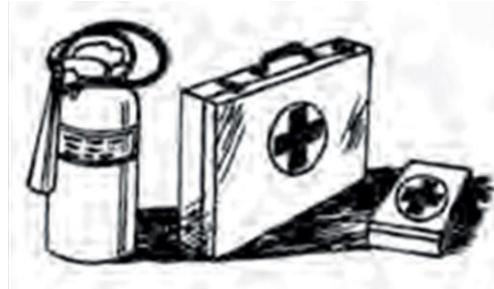

Thoroughly read the manual before starting to work

DANGER

Do not handle the plough when lifted, danger of flattening. Keep safety distance.

DANGER

Damage can be caused by the rotation of the plough. Keep safety distance.

Be prepared in case of emergency

Have near a first aid kit and an extinguisher. Write down the telephone numbers of doctors, ambulances and firemen and keep them near the telephone.

Use suitable clothes

Avoid loose clothes and use suitable equipment of security according to the type of works. The safe handling of the machine requires all the attention of the operator.

Don't put on auricular to listen to the radio during the work with the machine.

	CH-19-P	19	5,3	3	215-275
	CH-21-P	21	5,9	3	230-290

3. PROTECTION SYSTEMS

The different auto-reset protection systems (leafspring / rubber dampers) work automatically. When finding any obstacle, the system allows the tine to trip up and overcome it then returning to its working position without stopping the tractor.

In this way, all impacts caused by irregularities on the field are absorbed by the protection system which, therefore, protects all of the elements on the equipment as well as on the tractor.

Also because of this reason, the auto reset protection systems decreases the required pull power as they prevent the tractor from ripping all obstacles that the field may present to an even work (Fig.2).

Note: Ovlac's auto reset protection systems are set at the factory at an optimal pressure for average soils.

Fig.2

4. SET TO WORK

4.1 – HITCHING TO THE TRACTOR

Ovlac equipment are designed to fit the universal 3-point linkage of any tractor

The cross shaft is supplied in two versions (center-to-center distance):

- Category II 870 mm
- Category III 1.010 mm

Before hitching the equipment, check the following:

- The lower links of the tractor are adjusted at the same height and length.
- The wheels of the tractor have identical air pressure. This pressure must be according to the manufacturer's instructions
- The lower links of the tractor must be centered and allow for a small oscillation

4.2 – ALIGNMENT

The plough should always work in line with the tractor. If not, the tractor will tend to leave the furrow course. Check that lengths A1=A2 (Fig. 3)

Crabbing is corrected automatically in OVLAC ploughs thanks to their oscillating cross shaft. In ploughs with fix coupling, act on the drifting-correction turnbuckle (hydraulic in option).

The third point should be linked so that the end linked to the plough be slightly higher than the one linked to the tractor (Fig. 4)

The third point should always be placed in the oblong hole E (Fig. 3), trying that its length does not hinder it to move while working.

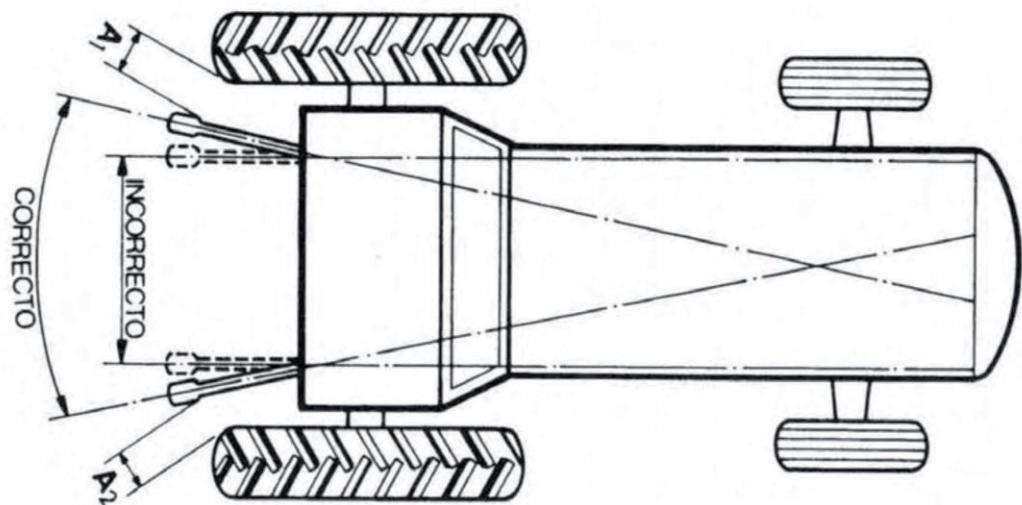

Fig.3

Fig.4

4.4 – OTHERS ADJUSTMENTS

The length of the third point should be adjusted so that the frame works in a parallel position with respect to the field since, if not, the first bodies would plough at a different depth than the rear ones achieving an uneven labour (Fig. 5).

For the same reason, check that the beams work vertically to the field (Fig.6). To achieve this, make sure that the lifting arms of the tractor are at the same height and act on the adjusting bolts A at the headstock (Fig. 7).

IMPORTANT: Care should be taken not to take curves at work, especially with very wide tools, because the effort lever can cause serious damage to the structure of the machine.

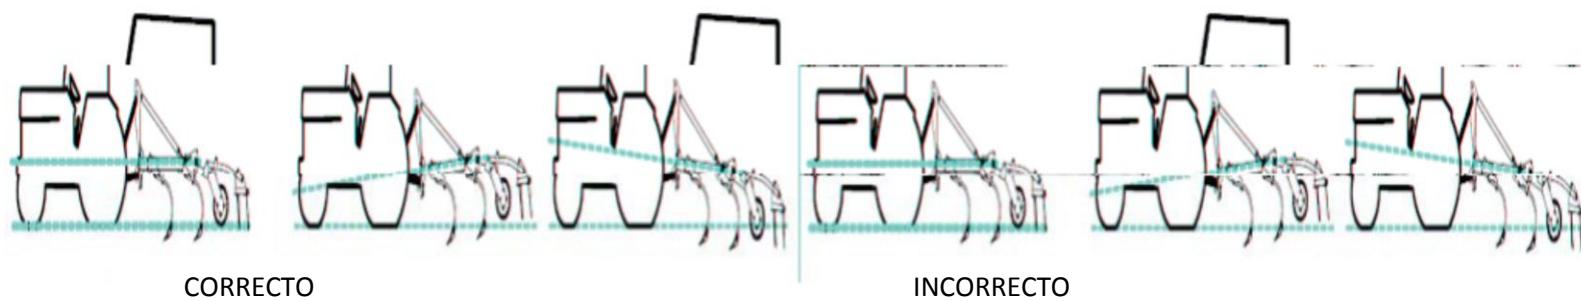

Fig.5

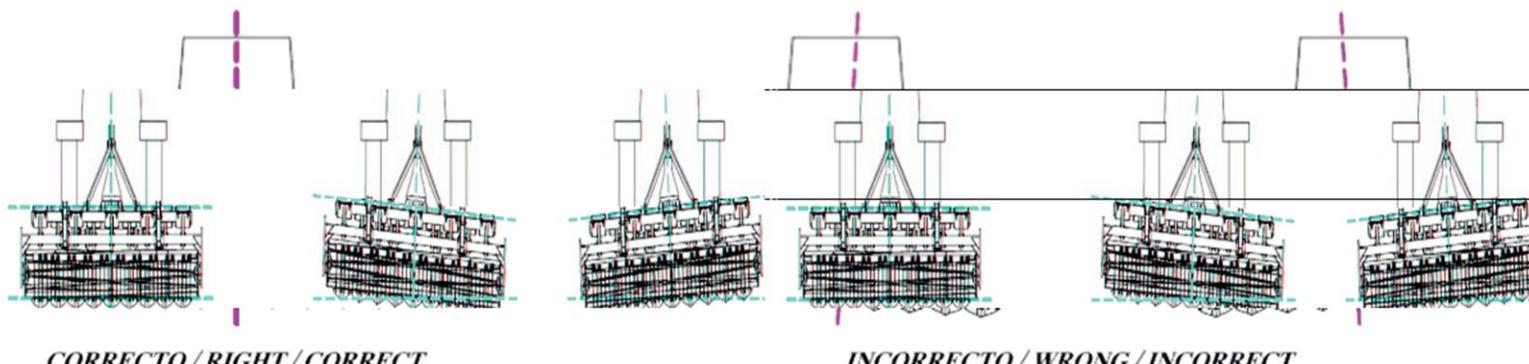

Fig.6

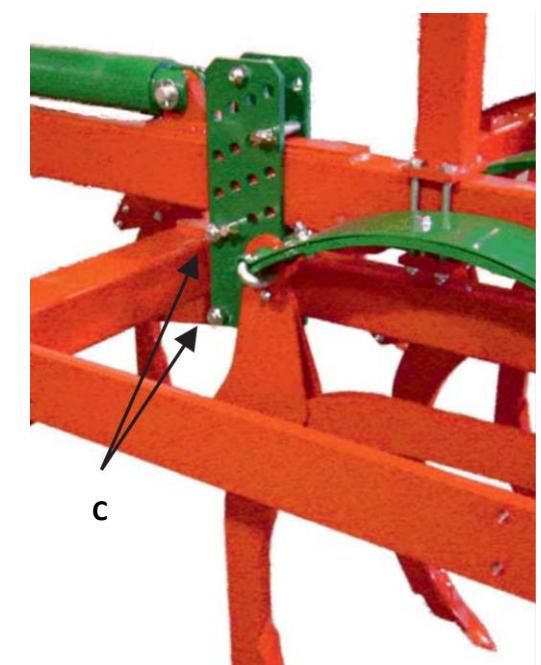

Fig.7

5. WORKING DEPTH

The working depth is set via the tractor hydraulic. Nevertheless, in order to get an even working depth, all Minichisel can be equipped with:

- Side wheels whose height is adjusted by means of pins A (Fig. 8)
- Roller whose height is adjusted by means of pins B (Fig. 9)

In CH cultivators equipped with rear disc harrow, its working depth is adjusted by means of pins C (fig.10)

6. TRANSPORT

In foldable machines, the side frames must be folded in hydraulically for transport (Fig. 11) in order to carry the machine in its minimum width.

If the CH is equipped with rear foldable disc harrow, fold it on to the CH for an easier and safer transport on the road (Fig. 12).

Fig.11

Fig.12

7. MAINTENANCE

Retighten all bolts and nuts after the first 8 hours of work, specially the ones of mouldboards, shares and points. Henceforth, check every 100 hours of work. When putting the plough away, clean and grease thoroughly the mouldboards to prevent from rusting.

Lubrication: grease the greaser.

Safe maintenance

Be used to the maintenance procedures before carrying out the works. The working zone must be clean and dry. Don't carry out any work of lubrication, repair or adjust with the motor enabled. Keep the hands, feet and clothes always far from movable components. Turn all the controls off, to alleviate the pressure. All the components must be in good state and correctly installed. Repair damages immediately. Change any worn away or broken pieces. Maintain all the components of the machine clean of fat, oil and accumulated dirt. Because of being dragged equipment, disconnect the cable groups of the tractor before making works of weld in the machine.

Take care of the leaks of high pressure

The fluids that escape of the system can have as much force that they can penetrate the skin, causing serious injuries. Therefore, it is essential to leave the system without pressure before relaxing or disconnecting any pipe and make sure that all the connections and the hydraulic parts they are well tight before applying pressure to the system. In order to locate a hydraulic oil leak, use a piece of cardboard that is put on the connections. Do not approach the hands and the body to a leak of high pressure. If, in spite of this precaution, it happens an accident, go immediately to a doctor who should eliminate surgically the fluid within few hours to avoid gangrene. The doctors who do not have experience in dealing with these type injuries can go to a specialized medical centre.

Storage of the hydraulic sleeves.

IMPORTANT: maintain the plugs clean. The abrasive particles, like the sand or the metallic shaving, can damage the oil seals, shirts and cylinders, causing internal leaks. Once disconnected of the tractor, make sure that they are not in contact with the ground

8. OPTIONAL EQUIPMENT

The ploughs **CHISEL Ovlac** can be equipment with:

1. Wing share (Fig.13)
2. Additional bolt-on bodies. (Fig.14)
3. Additional foldable bodies. (Fig.15)
4. Wheels (Fig.16)
5. Rollers. (Fig.17)
6. V-shaped rear disc harrow(Fig.18)
7. Hydraulic folding of rear disc harrow. (Fig.19)

Fig.17

Fig.16

Fig.18

9. SPARE PARTS

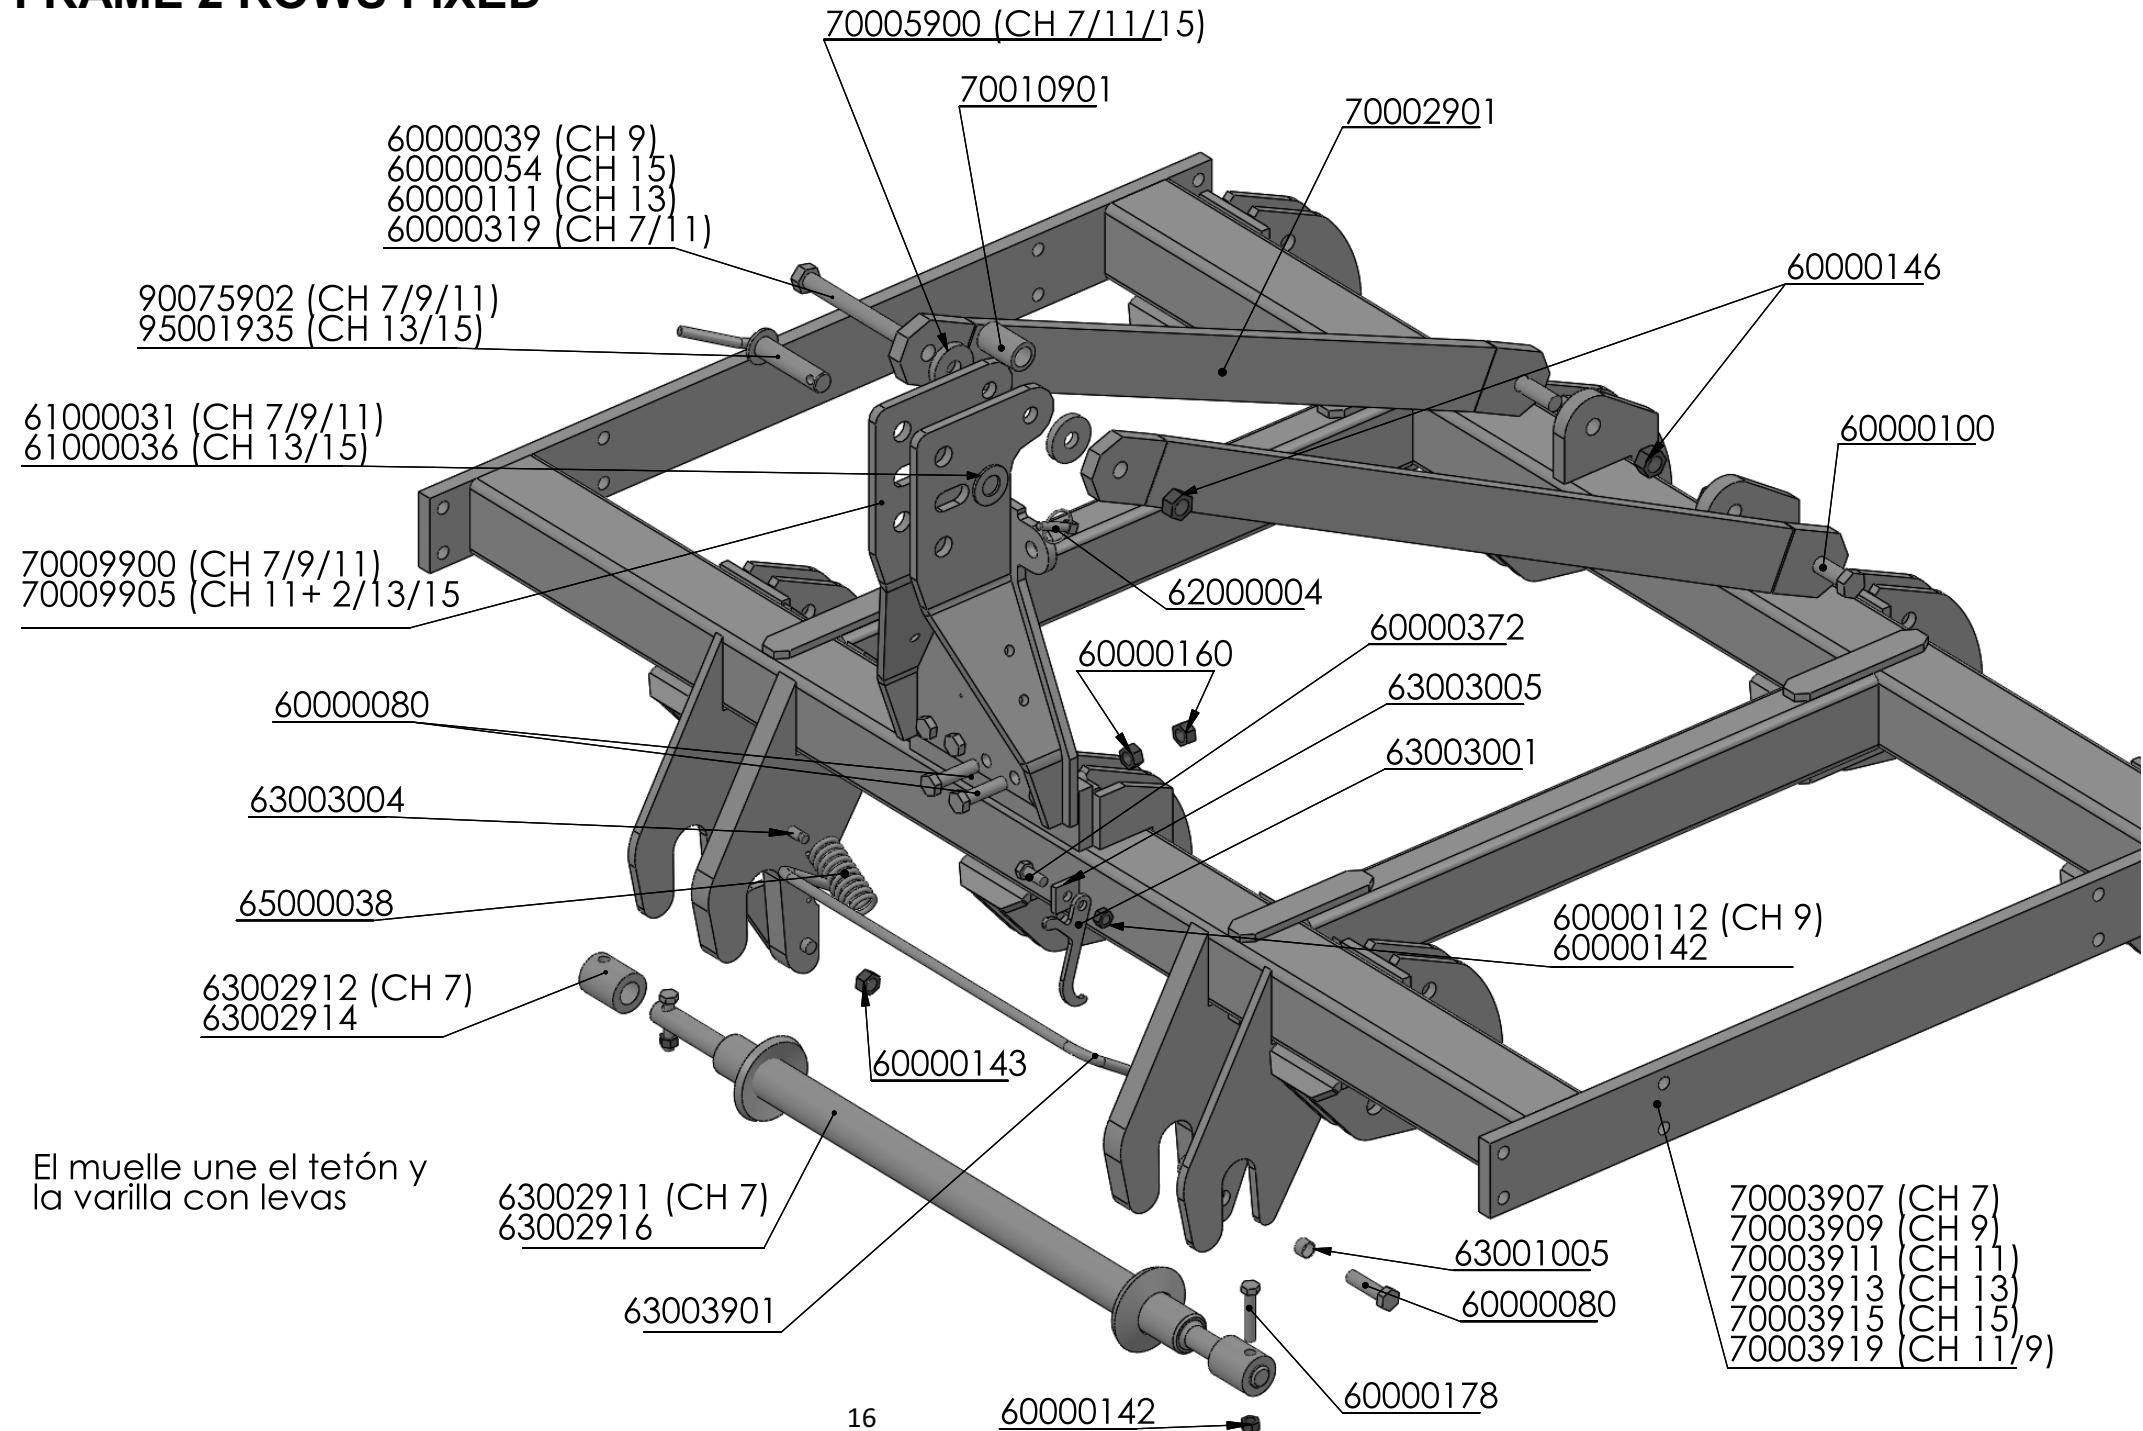

Spare parts should always be ordered from your dealer and should always include the following indications:

- **Type, model and serial number of the plough.** These data are punched on the identification plate with which every plough is equipped.
- **Code number of the required spare part.** This will be found in the attached spare parts list.
- **Description of the part and required quantity.**
- **Means of delivery.** Transport expenses shall always be at the consignor's charge.
- **NOTE:** The terms **Right** and **Left** indicated on the descriptions, refer to the plough when viewed from the rear. The spare parts components of waste equipment, as shares, mouldboards, etc., are considered right if they are mounted on a body which spills the soil to the right side and viceversa.
- **Note about the warranty:** The orders of spare parts in warranty should always be clearly specified. **The Manufacturer will always sentence if the spare parts are warranted in their replacement.**
- **Moreover, the warranty is suppressed if:**
 - The plough is repaired without authorisation from the Manufacturer, or spurious spare parts, and inadequate bolts are mounted.
 - The plough has been used beyond the specified power limit, or anomalous manoeuvres and operations have been made.
